

Company description

Care service providers and commissioners face an increasing challenge to meet the needs of a growing elderly population with higher expectations who seek to remain independent in their home throughout later life.

GenieConnect® is the UK's first older adult independence solution from Service Robotics Ltd. It utilises a small desktop companion robot, natural speech recognition and AI and Machine Learning. It is designed for domiciliary environments to reduce loneliness and isolation and enables deep user engagement courtesy of hyper-personalisation software. It provides 24/7 human contact via a bespoke Care Centre, delivers video calling on the screen of the robot and furthermore assists with health and welfare management through reminders, information, monitoring and alerts to carers or companions. It provides a user-friendly companion in the users home providing remote services and entertainment to support independent living coupled with light touch care provision.

Part time accountant/FD designate

You will be working for a growing B2B Health Tech company who is developing a companion robotics solution designed to help with one of our greatest societal challenges, that of caring for our growing older adult population - and is now building its team of core senior staff.

You will be required to set up and maintain the accounting and finance systems, and to build working relationships with outside financial service providers as necessary. You will be a self-starter, with clear ideas on how to apply accounting best practice in all areas.

As well as being responsible for our Xero accounting software, you will be required to prepare full management reports, manage the budget, and support the Board with business plan modelling and forecasting and certain company secretarial functions.

You will be expected to:

- Have relevant experience and / or to be qualified.
- Be fully conversant with Xero or a similar accounting program and UK accounting procedures.
- Have experience of early stage tech growth companies, ideally in a B2B business, in a senior role.
- Salary is £40k to £60k per annum pro rata depending on experience. The working days are flexible up to 2 days per week, possibly more to begin with.
- A flexible working policy is in place that provides for working from home when required.
- Benefits include a pension, and a dynamic working environment in a hi-tech startup hub on the UWE University campus, with car parking provided.
- Based on the UWE campus in the Filton area of Bristol, commutable from Swindon, Cardiff, Gloucester, Bath and many other regional towns and cities.

If you want to be part of a dynamic and growing team, at the crossroads of two of the most exciting themes in society of Robotics and Technology Enabled Care, please get in touch!
